*This study aims to determine the effect of Liquidity, Profitability, and Leverage on Stock Returns in manufacturing companies in the food and beverage sub-sector listed on the Indonesia Stock Exchange (IDX) for the 2016-2020 period. This study uses quantitative methods with secondary data in the form of financial reports obtained from the Indonesia Stock Exchange website ([www.idx.co.id](http://www.idx.co.id)). The sampling technique used the purposive sampling method with a total population of 32 food and beverage sub-sector companies listed on the Indonesia Stock Exchange during the 2016-2020 period and obtained a sample of 14 companies. The data analysis technique used is multiple linear regression with the help of the Statistical Package For The Social Science (SPSS) 25 program. Based on the results of the study, partially Liquidity as measured by the Current Ratio (CR) has no significant effect on Stock Return, Profitability as measured by Return On Assets (ROA) has a significant effect on Stock Return, Leverage as measured by Debt to Equity Ratio (DER) does not significant effect on Stock Return, and simultaneously Liquidity, Profitability, and Leverage significant effect on Stock Return.*
